

What's new in RadarOpus v3.2

New implementations and improvements of version 3.2 as compared to 3.1

RadarOpus **3.2** will be delivered as a **Live Update** over 3.1

SUMMARY

NEW FEATURES

- **New - Option to hide Families in any Repertory view** [p.4]
 - The user can now select from the Repertory preferences whether families are displayed.
 - This means you can now use any View without showing Families.
- **New - Show remedies of a Family in Synthesis Adonis** [p.5]
 - Mouse hover over a family in the Repertory and Analysis to show the remedy members of the family.
- **New - Changed R-click option for Families in the Analysis window** [p.6]
 - It is now possible to limit your analysis to the remedy members of a large number of families using the R-click context menu.
- **New - Moved Bookmarks to the Table of Contents** [p.8]
 - Added a hotkey (ctrl/cmd-6) to open Bookmarks list.
 - Navigation through the Bookmarks list can be performed with directional arrows and the Enter key to go to the selected bookmark.
 - It is now easier to see all Bookmarks and use them as shortcuts to navigate the program.
- **New – Family Finder v2** [p.13]
 - A new version of Family Finder has been released with RadarOpus 3.2, containing all of Anne Vervarcke's latest clinical data on Families and Remedies. Free update for existing users.
- **New – Kingdoms and families v2** [p.16]
 - In conjunction with the latest edition of the Family Finder, we have updated the database which provides the backend for remedies and families in the Family Finder.
- **New - Menu item for copying the analysis** [p.19]
 - For when you would like to paste into a Word document.

- **New - Copy symptoms from previous consultation into the current one** [p.21]
 - Added a button & menu item that copies a symptom from any previous consultation and pastes it into the current consultation, including all the assigned Tags.
- **New - Option to hide prescription in Anamnesis summary window** [p.22]
 - This is useful for teachers who wish to present cases using the RadarOpus Patient File. Previously, the remedy name would always be displayed when displaying important symptoms in a new window.
- **New - Live Update works in background**

IMPROVEMENTS

- **Improved - Organization of the repertory view menu** [p.23]
 - Added separator lines to clarify how the Views are organized.
 - Added a Help page with a description of how the Views are organized and assembled.
- **Improved - Behavior of browsing in Navigation windows** [p.24]
 - In the Navigation window of a Repertory or Materia Medica, previously the cursor would return to the beginning of the chapter (or list of subs-rubrics) after pressing backspace or the left arrow key.
 - Now the cursor reverts back to the previous cursor position, which makes navigation more intuitive and easy.
- **Improved - In the Patient File Pathologies grid, added a tick icon** to display that the chosen pathology is taken from the picklist (and is therefore compatible with Clifical). [p.25]
- **Improved – Highlight multiple families in the Analysis from the Table of contents (TOC).** Previously, it was only possible to highlight one family at a time. Now, the Homeopath can R-click on multiple families, choosing the option 'Highlight this family in the analysis'.
 - A further useful option is to R-click any highlighted remedy in the Analysis and choose the option 'Consider only the selected remedies'.
 - Now the Analysis will be limited to all the remedies from the highlighted families selected from the TOC.

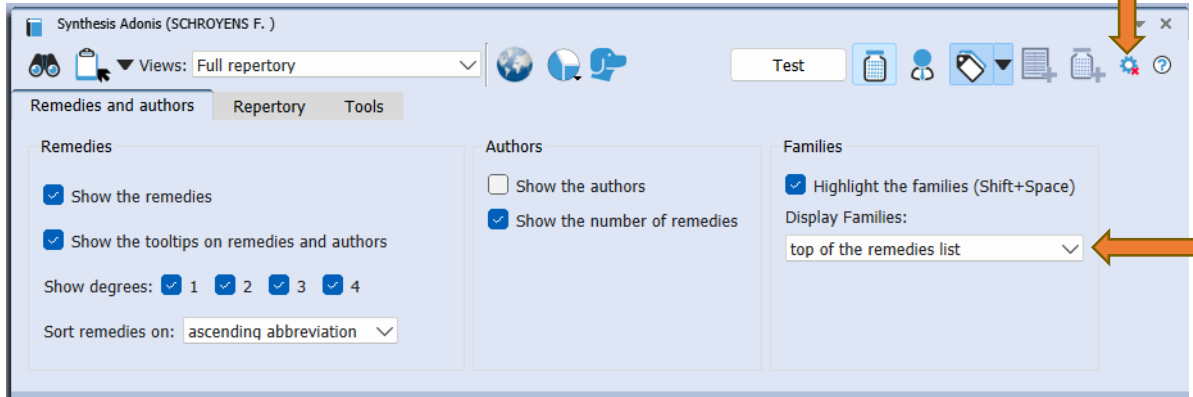

FIXES

- *Fixed* - Problem importing cases from Radar10. When importing a .CAS file containing Analyses in German, special characters were not shown correctly.
- *Fixed* - Graphic problem in the Mac version when selecting Cross references to be taken to the clipboard with the main symptom. Previously the tick icon was not displayed.
- *Fixed* - When changing from full repertory view to a smaller view, the option "show the rubrics excluded from the view" was not considered anymore. The user previously had to disable/ enable again.
- *Fixed* - in Synthesis: with "show remedies" on, "show authors" on; "tags" off; and "hide symptoms excluded from the view" on – when the user clicked to hide the authors or to hide the remedies, the tags were automatically switched back on and the excluded symptoms set to on.
- *Fixed* – With Synthesis Treasure Edition and Adonis both open and both views set to 'Pierre Schmidt' - each time you switch the repertories, the views were set back again.
- *Fixed* - Allen Keynotes in Turkish was not displaying in the list of Favorite Keynotes.
- *Fixed* - Display problem in the Navigation window of Synthesis with Russian translation. Text was centered and missing abbreviation point.
- *Fixed* - Error importing Synthesis App Analyses.
- *Fixed* – Incorrect Analysis results when using a Combined symptom with a View other than "Full".
- *Fixed* - Problem when taking Cross references (in a translated language) to a clipboard. They would appear in English instead of the translated language.
- *Fixed* - Problem when importing singles cases (CAS files from Radar 10) in subfolders.
- *Fixed* – in Materia Medica, with zoom set to 100%, the text would previously overstep the border of the screen at the right.

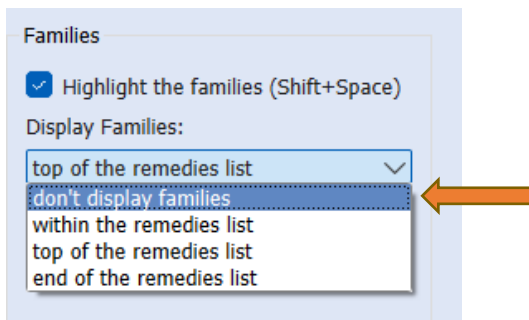

HIDE FAMILIES IN ANY REPERTORY VIEW

You can now select from the Repertory preferences whether families are displayed in Synthesis Adonis (and other repertories). This means you can use any Synthesis View without displaying Families. Previously, you could only hide Families by using a Synthesis View. This resulted in it not being possible to use another alternative view such as the 'Pierre Schmidt view' for example.

Click the preferences/ configuration icon in any Repertory (opens local preferences).

In the drop down menu, select the option 'don't display families' if you would prefer not to see families within your repertories.

This ensures that you can use another Synthesis View – e.g. Vithoukaskas view – and be sure that no families will be displayed, which of course stays truer to the Homeopathic vision of this author.

E.G. Vithoukaskas View of Synthesis Adonis with no families displayed.

Synthesis Adonis (SCHROYENS F.)
 Views: Vithoulkas

SHOW REMEDIES OF A FAMILY IN SYNTHESIS ADONIS

Hover the mouse over a family in the repertory to show the remedies of that family. A useful enhancement to the existing functionality of RadarOpus, which shows at a quick glance which are the remedy members to consider from a family.

Tip – Click the left mouse key on the floating window to stop it from disappearing.

MIND - OFFENDED, easily

OFFENDED, easily: (= HURT; easily - mentally hurt) (= LOSING ONE'S TEMPER) (= SENSITIVE - jesting; to) (= TAKING everything in bad part) (= TOUCHY) (= BAD PARTS; taking everything in) (227) calc-* composit* halogens* liliac* merc-* metals* milks* ophidia* **Ranuncul*** ranunculul* *Rosal** series-5* series-6* stage-10* s

- Lac humanum pro viro

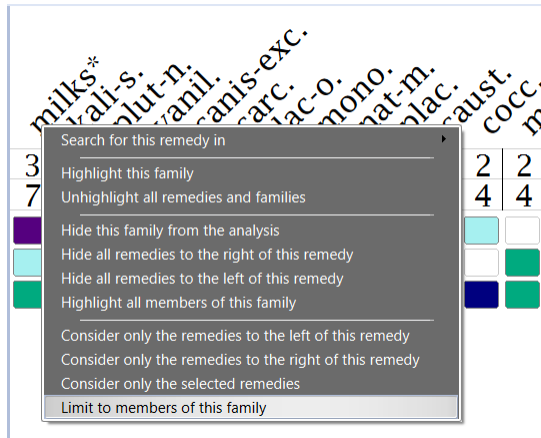

R-CLICK ON FAMILIES IN THE ANALYSIS WINDOW

It is now possible to filter your analysis to the remedy members of a large number of families which are present in the Analysis. For example:

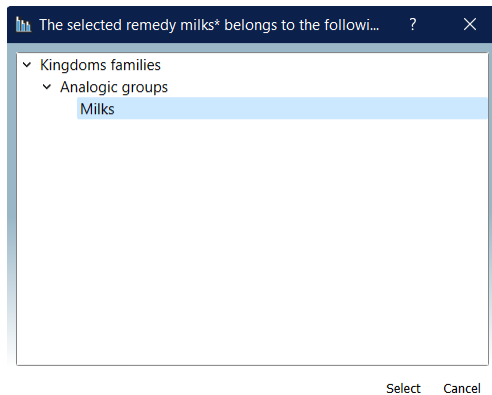

Milk remedies seem to be highly indicated in the Analysis above. One also sees *Lac ovinum* covering all 3 symptoms. It is now easier to limit the analysis to quickly see the most indicated remedies of a family.

R-click on a family to see the following options:

Click on the final option to limit the Analysis to that family. After clicking this option, you will see a floating window displaying the taxonomy (which in this case is absent since we are looking at a group based on the shared characteristics of milk).

Click on the exact family you would like to limit the Analysis to, then the results will change accordingly, making a family-based differential very easy to achieve:

BOOKMARKS MOVED TO THE TABLE OF CONTENTS

It is now easier to see all of your Bookmarks and use them as shortcuts to navigate the program. We have also added a hotkey (Ctrl/Cmd-6) to open the Bookmarks list in the Table of Contents (TOC).

Navigation through the Bookmarks list can be performed with directional arrows and the Enter key to go to the selected bookmark, making the process of navigating your way through RadarOpus easier and more customizable.

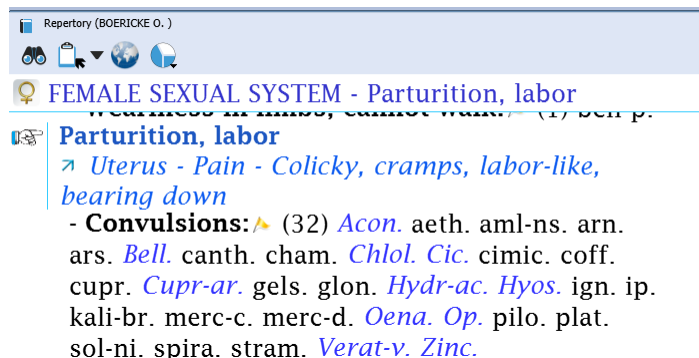

The Bookmarks icon in the Toolbar has also been repositioned to reflect its new relation to the Table of Contents.

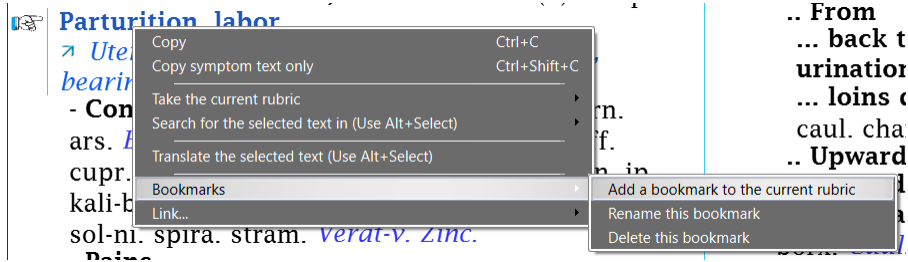

Note – the method of adding a Bookmark to a chapter, symptom or reference has not been changed

To add a Bookmark, follow these steps:

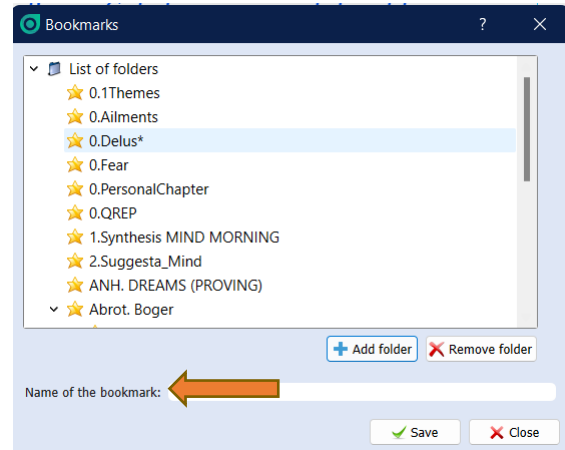

- E.G. Open a Repertory, navigate to a chapter or even a particular section of a chapter to which you would like to add a Bookmark.
- In this example, I have selected the section on Labor in Boericke’s Repertory.
- With the hand icon pointing at this section, R-Click to see the options.

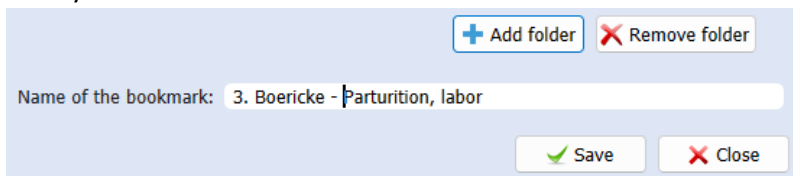

- Click Bookmarks
- Then click *Add a bookmark to the current rubric.*
- The next window opens, where you can give a name to the Bookmark to keep it organized in the TOC.

Tip – for the most-used Repertories or Chapters, you can start the name with a number – e.g. 0 for the bookmarks you would like to appear first in the list. You might use 0 in front of any section relating to Synthesis Adonis, then 1 for another repertory, etc.

- Here you can see the name of the bookmark

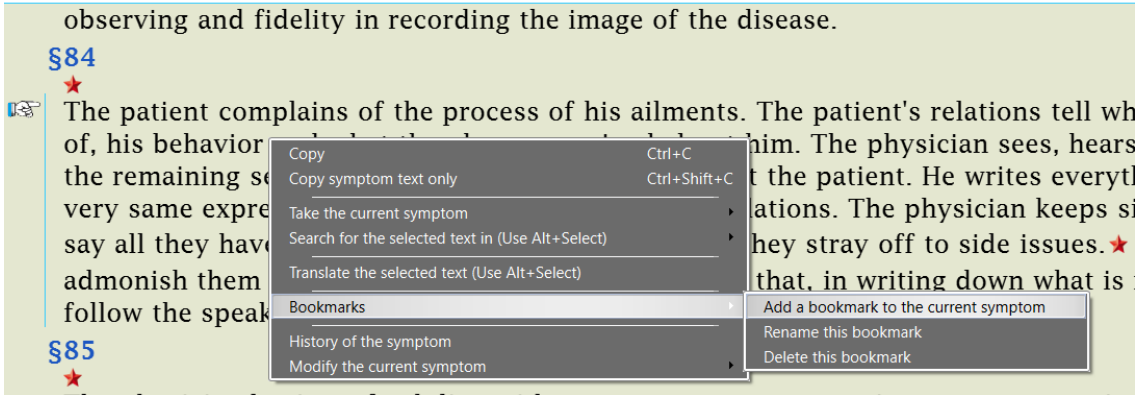

- And its location in the TOC
 - ★ 0.QREP
 - ★ 1.Synthesis MIND MORNING
 - ★ 2.Suggesta_Mind
 - ★ 3. Boericke - Parturition, labor
 - ★ ANH. DREAMS (PROVING)
- Any time you would like to return to that location, you can press **ctrl/cmd-6** or click the Bookmarks Icon.
- Type “3”
- Type ENTER – and you are back at that exact point in Boericke’s Repertory!

The same process applies to Materia Medica (or any Reference)

- E.G. Open the Organon of the Medical Art Practitioner (Wenda Brewster O’Reilly translation)
- Navigate to the section you wish to bookmark.

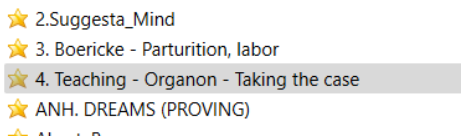

Taking the case - Guidelines for case-taking - §84

- R-click the text, choose Bookmarks, then *Add a bookmark to the current symptom.*

- Name it.
- Save it, and it appears in the TOC

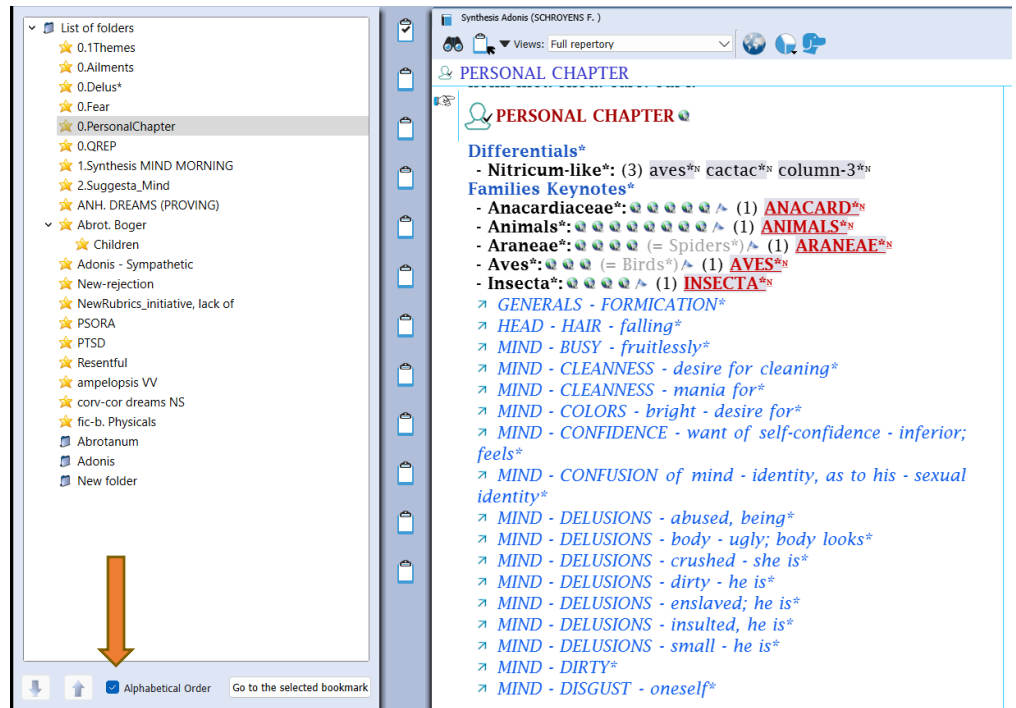

Suggestions of ways to optimize your RadarOpus user-experience with Bookmarks

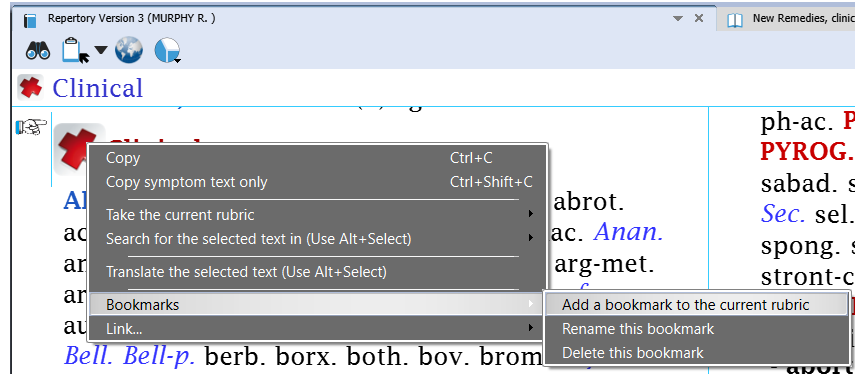

- **Add shortcuts to your most-used repertories and chapters**

E.G. You can add a Bookmark to the Personal Chapter of Synthesis Adonis

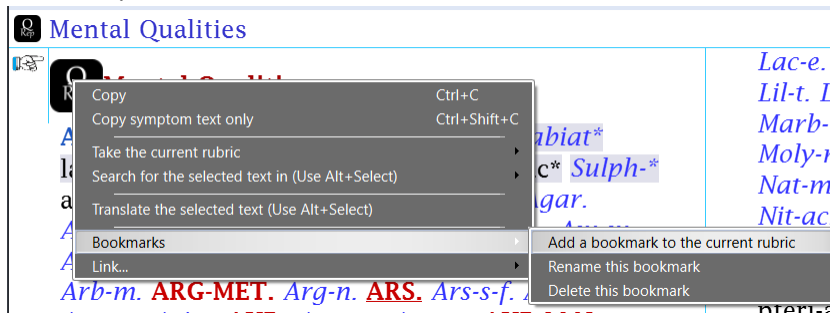

Tip – tick the option to sort your bookmarks by alphabetical order. This is located at the bottom of the TOC

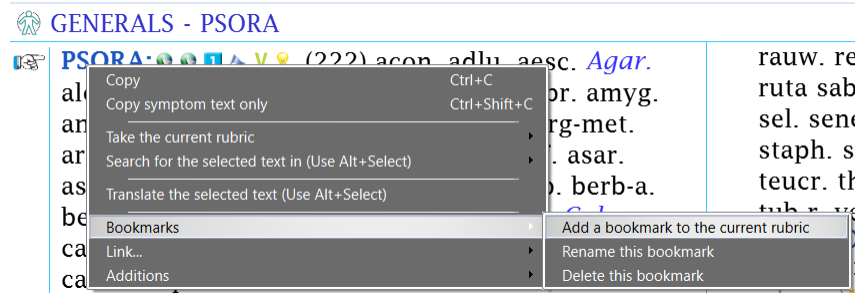

- E.G. Clinical chapter of Murphy's repertory

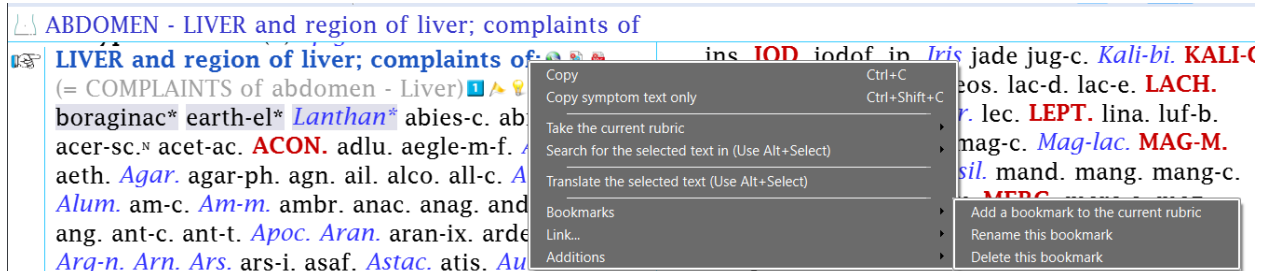

- E.G. Q Rep

- E.G. Miasms in the Synthesis Adonis Generals Chapter

- E.G. Affinities symptoms in Synthesis Adonis

• You can also easily collect references and rubrics for teaching/ research.

FAMILY FINDER V2

Anne Vervarcke has been busy updating the data which provides the framework for the Family Finder search engine. This free update (for existing users of Family Finder) brings RadarOpus up to date with Anne's latest clinical confirmations. You will now find more information on several families and remedies, including:

- Viruses
- Bacteria
- Waters
- Celestial bodies
- Lichens
- Ferns (Monilophytes)
- Gymnosperms
- Mosses (Bryophyta)
- More Imponderabilia
- More Sarcodes
- More Fungi remedies
- More Plant remedies
- More Worms
- More Reptiles
- More Amphibians
- More Fish
- More Mammals
 - E.g. Ungulates, Rodents, Primates

Some examples:

A search for the family 'Waters'

The screenshot displays the RadarOpus Family Finder V2 interface. At the top, there are tabs for 'Words', 'Family', and 'Remedy'. The 'Family' tab is active. A search bar contains the word 'waters'. Below the search bar, a list of family members is shown, including 'carl. - carlsbad aqua', 'chal. - chalice aqua', 'elmen - elmen aqua', 'hall - hall aqua', 'marien. - marienbader aqua', 'sanic. - sanicula aqua', 'tunbr. - tunbridge wells aqua', and 'vichy-g. - vichy aqua grande grille'. To the right, a 'Tree' view shows a hierarchical structure of family members under the 'waters' category. Below the search results, there is a section titled 'Experience, Theme, Context or Expression of "waters"' which lists various themes such as 'lonely and deserted birthplace', 'highly stressed/tense', 'panic/fear when alone', 'high standards', 'fixed ideas or actions', 'oversensitive to noise', 'leading/helping to include others', and 'everybody should be treated equally'. At the bottom right, there is a contact information link: 'Contact Anne Vervarcke: write a Mail or access to her Web site'.

A search for the family 'Viruses'

The screenshot shows the RadarOpus interface with three main sections: SEARCH, FAMILIES/REMEDIES, and NAVIGATE. The search bar contains 'viruses'. The FAMILIES/REMEDIES section displays a list of family members with their counts:

- viruses (87)
- dna viruses (4)
- rna viruses (20)
- bvdv. - bovine viral diarrhoea virus
- cov-19 - covid-19 virus
- cov-s. - sars virus
- ebol-xyz. - ebolavirus unknown species
- eps-b. - epstein-barr virus
- herp-s. - herpes simplex nosode
- herp-z. - herpes zoster nosode
- influ. - influenza
- lyss-vc. - vaccinum rabiei ex cellulisi
- rota. - rotavirus
- vario. - variolinum

The NAVIGATE section shows a tree view of the 'Viruses' family with sub-items like 'aids', 'astrov-h-xyz', 'bvdv.', etc. Below the search results, there is a section titled 'Experience, Theme, Context or Expression of "viruses"' with the following text:

weak and sick
influence
 sabotaged
 damage, impair, spoil
 system disrupted and declines progressively
 low vitality
 no clear direction, yet determined
 influencing the world
look good, feel low

Contact Anne Vervarcke: write a Mail or access to her Web site

A search for the family 'Bacteria'

The screenshot shows the RadarOpus interface with a search for 'bacteria'. The FAMILIES/REMEDIES section displays a list of family members with their counts:

- bacteria (189)
- bord-pt. - bordetella pertussis
- borr-bd. - borrelia burgdorferi
- brucel. - brucella melitensis
- chlamy-p. - chlamydia psittaci
- clostr-bt. - clostridium botulinum
- eberth. - eberthinum
- giard-lb. - giardia lamblia
- helic-p. - helicobacter pylori
- lepr. - leprominum
- leuco-c. - leuconostoc cremoris
- mucot. - mucotoxinum
- pneu. - pneumococinum
- pseud. - pseudomonas aeruginosa
- scarl. - scarlatinum
- shig-d-d-xyz. - shigella dysenteriae dolisos unknown species
- streptoc. - streptococinum unknown species

Below the search results, there is a section titled 'Experience, Theme, Context or Expression of "bacteria"' with the following text:

no centre
low vitality
 many vague symptoms
 my body, my health, my strength
one gets the idea of no depth in the case
no own opinion / point of view
the case seems confused
statements contradict each other
as if they only repeat what is the opinion of others

A search for the family 'Celestial bodies'

The screenshot shows the RadarOpus interface with a search for 'celestial bodies'. The search bar contains 'celestial bodies' and a magnifying glass icon. The results list 15 entries, including 'alpha-ct. - alpha centauri', 'gala - gala', 'jup. - jupiter', 'luna - luna', 'mars - mars', 'neptun. - neptune', 'pluto - pluto', 'saturn - saturn', 'sol - sol', 'uranus - uranus', and 'ven-s-e. - venus stella errans'. A 'Tree' view on the right shows a hierarchical structure under 'Celestial Bodies'. Below the results, there is a section for 'Experience, Theme, Context or Expression of "celestial bodies"' with a list of phrases: 'need to keep up high', 'disappear in oblivion', 'initiation of puberty', 'go alone', 'can't trust the offered support', 'big groups', 'desire to be special', 'inertia', and 'show off'. A 'zoom' button is visible on the right side of this section. At the bottom right, there is a contact link for Anne Vervarcke.

A search for the word 'sick'

The screenshot shows the RadarOpus interface with a search for 'sick'. The search bar contains 'sick' and a magnifying glass icon. The results list 87 entries, including 'viruses', 'lac-pan-tr. - lac pan troglodytes', 'mosch. - moschus', 'stict. - sticta pulmonaria', 'agrosti-ca. - agrostis capillaris', 'apteno-f. - aptenodytes forsteri', 'bacteria', 'galv. - galvanismus', 'lichens', 'marien. - marienbader aqua', 'petros. - petroselinum sativum', 'pteri-s. - pteridium aquilinum', and 'rota. - rotavirus'. A 'Tree' view on the right shows a hierarchical structure under 'Kingdoms and families (version 2)', including 'PLANTS Cronquist', 'Fungi', 'Lichens', 'Ascolychenes', and 'Peltigerales'. Below the results, there is a section for 'Experience, Theme, Context or Expression of "Sticta pulmonaria"' with a list of phrases: 'off balance', 'fading away', 'always sick', 'numerous symptoms', 'mucus in lungs, difficult breathing', 'unnatural', 'hysteria', 'dependent, need an anchor', and 'hopeless'. A 'zoom' button is visible on the right side of this section. At the bottom right, there is a contact link for Anne Vervarcke.

KINGDOMS AND FAMILIES V2

The Kingdoms and families repertory (which provides the backend for all aspects of RadarOpus' handling of families) has been updated. Luke Norland has continued the work of Will Taylor who originally authored the repertory. This item is a free update for all users with Package 4 & 5, and is payable for anyone with Package 1, 2 or 3. You will now find much more family data on:

- Viruses (including covid 19)
- Bacteria
- All Animal groups updated
 - Included a simpler division of Invertebrates and Vertebrates in accordance with the Evolution Method approach of categorization.
- Cronquist plant classification – including remedies listed at the level of Order and Subclass
- Imponderables
- Fungi
- Organic compounds
- Analogic groups
 - Predator
 - Prey
 - Sarcodes
 - Gemstones
 - Lianas and Vines
 - Celestial bodies
 - Sugars

Examples: here you can see that all remedies in the **Magnoliidae subclass** have been copied upwards to create a super rubric. This makes it easier to drag and drop the rubric to an Analysis.

MENU ITEM FOR COPYING THE ANALYSIS

It was already possible to copy-paste the Analysis, but there was not a Menu item for it. This has now been added. With the Analysis open, click on EDIT in the Menu bar, then click on *Copy analysis*.

You can then define how many lines you wish to copy.

WHAT'S NEW IN RADAROPUS 3.2

Finally, you can paste the Analysis into a Word document.

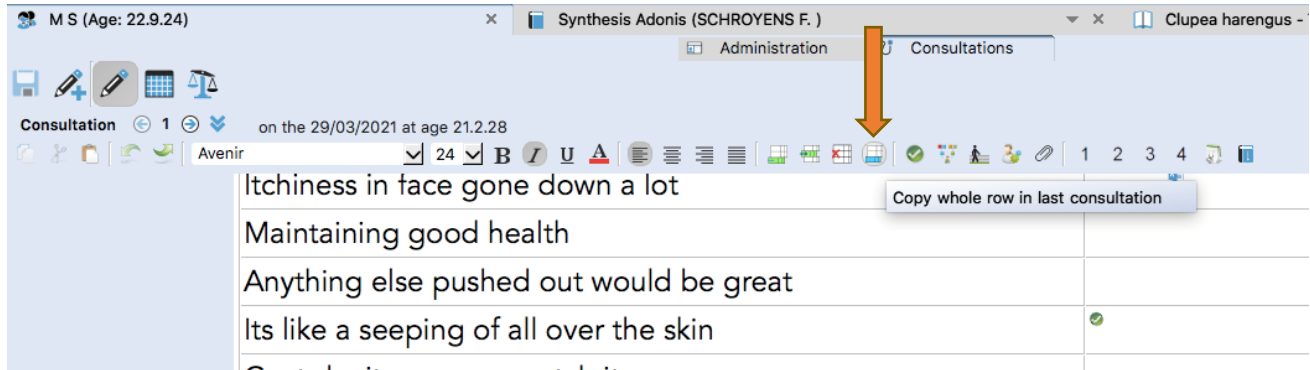

Sum of symptoms (sorted degrees) - Intensity is considered

1	1234	3	MIND - IMPRESSIONABLE	94
2	1234	2	MIND - TRAVELLING - desire for	110
3	1234	3	RESPIRATION - ASTHMATIC	457

COPY SYMPTOMS FROM PREVIOUS CONSULTATION INTO THE CURRENT ONE

We have added a new feature which allows you to **copy a symptom** from a previous consultation into the current one. This makes it easier, when cross-checking with the patient which symptoms are remaining, to move them into the current consultation. *The button can be found here:*

The example below shows how you can easily copy the patient's remaining symptoms from the previous consultation to the current one. Navigate to the symptom you are concerned with, then click the new **Copy row** icon.

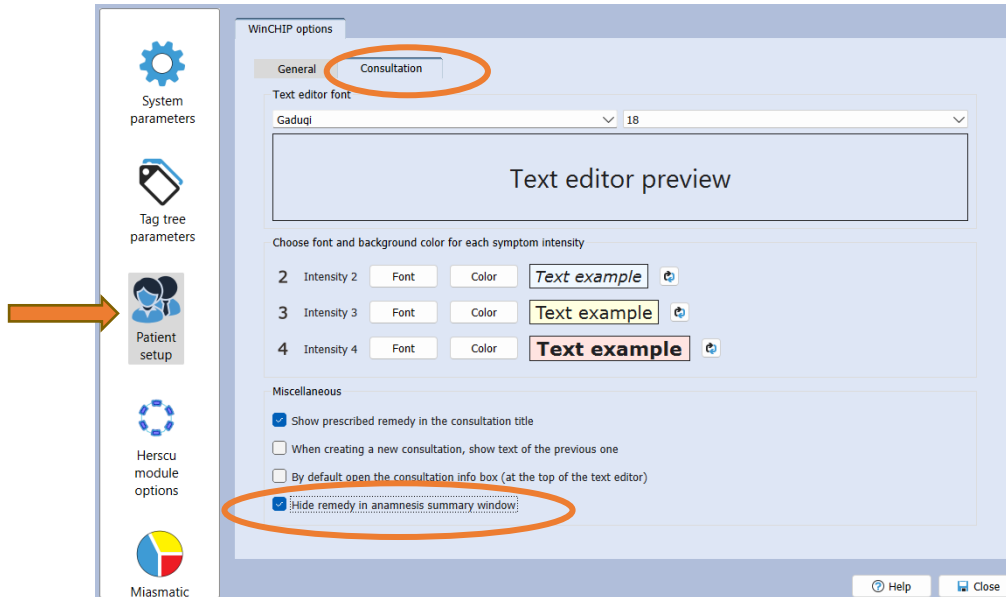

HIDE PRESCRIPTION IN ANAMNESIS SUMMARY WINDOW

Open the General Options by clicking Tools – Options (Windows), or by typing 'cmd + comma' (Mac).

Click on the Patient File icon in the Left side Bar, then click on the *Consultation* tab.

Tick the option to *Hide remedy in anamnesis summary window*.

This allows Homeopaths to present their cases using the Patient File, without revealing which remedy they prescribed.

It was already possible to hide the prescription details in the main consultation, but not when you viewed the summary of the important, or graded symptoms.

E.G. The image to the right shows all extracted grade 4 symptoms in the text.

Sentences with intensity 4: in all consultations

Cons. No.	Date/Time	Text	Series
Cons. No.1	16/09/2021 10:29	I remem* in a really dark place - as if going up a hill, if got over the top of the hill would have gone on auto destruct	
		Me getting to know me	series 3
		Use comedy as a deflection method of coping	
		Way of coping was to phone around to FIND SOMEONE to speak to - to wear the mask of that relationship	series 3
		There is this disharmony in the Rel -	
		About my REL WITH ME	
		I LIKE BEING RESPECTED	
		You can hide behind. A face covering that hides your true identity or changes your identity. It can allow you to appear to be someone you're not...	
		If I can just kee my fucking ego QUIET for a while - just not be triggered by it	
		Harmonic irregularities - work and research pulling in 2 ddiff directions	
		Rel and C pulling in 2 diff directions	
		TREMOR	
		Feels like its voluntary - that you are shaking your leg but comes on in involuntary moments.	
		My body is amazing.	
		Would be nice to have the shake go away - it is there for a reason!	
		Would be nice to have it not quite so PUBLIC	
Cons. No.5	25/01/2022 10:30	Maybe that was the point when leg started shaking	
		Sure, unshakeable - still a bit of rockiness	
Cons. No.9		My work isn't respected	

WHAT'S NEW IN RADAROPUS 3.2

Previously, the remedy abbreviation would always show in such examples, meaning there was limited scope for using the Patient File to teach/ present cases.

Cons. No.1 16/09/2021 10:29 aur-s. 1000 CH	I remem* in a really dark place - as if going up a hill, if got over the top of the hill would have gone on auto destruct

ORGANIZATION OF THE REPERTORY VIEW MENU

We have added separator lines to the Views menu.

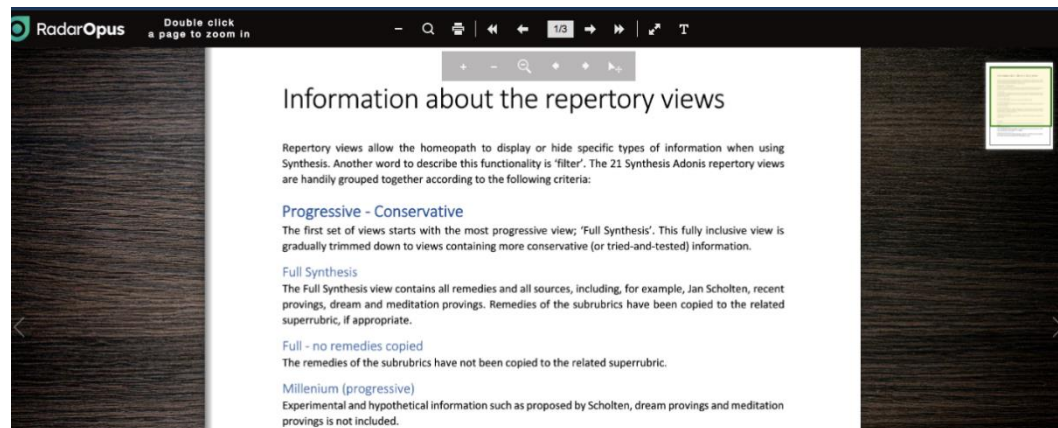

This helps to clarify how the Synthesis Views have been organized and assembled.

The menu includes a link to an online Help page which describes each View and the logic behind them.

By clicking on the final item, *Information about the view*, you will be directed to the following URL, where you can learn more.

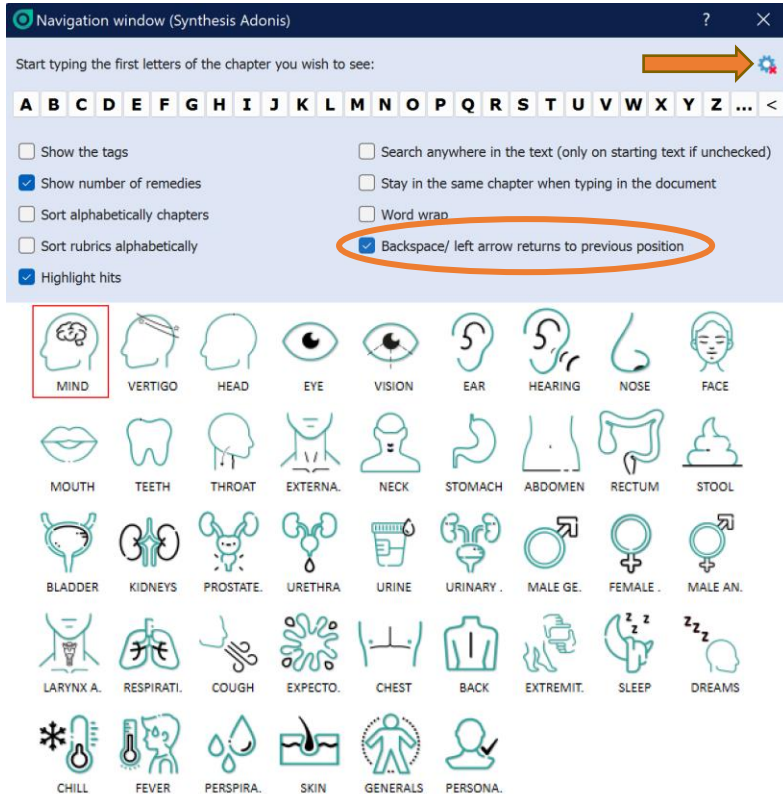

https://cdn.radaropus.com/RadarOpus/docs/synthesis/repertory_views/adonis/en/

IMPROVED BROWSING IN NAVIGATION WINDOWS

In the Navigation window of a Repertory or Materia Medica, previously the cursor would return to the beginning of the chapter (or list of subs-rubrics) after pressing backspace or the left arrow key.

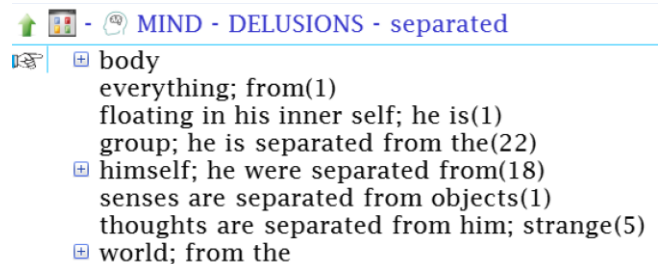

Now the cursor reverts back to your previous cursor position, which makes navigation more intuitive and easy. You can apply this setting by clicking on the preferences/ configuration icon of the Navigation window. Then tick the option - *Backspace/ left arrow returns to previous position*

E.G. Navigate to MIND – DELUSIONS – separated. You might then want to drag & drop one of the sub rubrics onto a clipboard.

When you press Backspace or the Left arrow key, the cursor moves back to the previous level in the Delusions section.

As below:

 - **MIND - DELUSIONS**

  separated
 seriously; is not taken(2)
 serpent fastening on his neck; a crimson
 servants; he must get rid of(1)
 seven seemed significant(2)
 sewing, she is(1)

Previously, the cursor would have jumped back to the beginning of the DELUSIONS section.

PATIENT FILE PATHOLOGIES – CLIFICOL INTEGRATION

When adding a pathology to the Patient File, there is a detailed *Picklist* of pathologies that integrate with Clificol.

All pathologies		Prescriptions	Pathologies
Consultation date	Pathology		
1	25/10/2022 12:45		

You can open the Picklist by clicking the down arrow in the Pathologies text field - see image to the right.

This window appears, where  you can type to find the pathology. E.G. type 'renal'

renal 

- Acute renal failure
- Aneurysm of renal artery
- Atherosclerosis of renal artery
- Benign neoplasm: Adrenal gland
- Chronic renal failure
- Congenital renal artery stenosis
- Congenital single renal cyst
- Congenital vesico-uretero-renal reflux
- Embolism and thrombosis of renal vein
- End-stage renal disease
- Gout due to impairment of renal function
- Hepatorenal syndrome
- Hyperostotic heart and renal disease

Total found: 27

Search for: Starts with

- Abdominal pregnancy
- Abdominal rigidity
- Abnormal bowel sounds
- Abnormal head movements
- Abnormal involuntary movements
- Abnormal posture
- Abnormal reflex
- Abnormal secretion of gastrin
- Abnormal sputum
- Abnormal weight gain
- Abnormal weight loss
- Abnormalities of size and form of teeth

Total found: 2449 1 of 25

Pathology	Clificol ready	Duration	Trend	Still active	Fatal

Add a pathology from the list, then a tick is displayed. When the chosen pathology matches with an item in the Picklist, this enables full integration with Clificol.

All pathologies		Prescriptions	Pathologies
Consultation date	Pathology		
		Clificol ready	
1	25/10/2022 12:45	Gout due to impairment of renal function	
1	25/10/2022 12:45	mandatory
